DETAILED ACTION

1. This Office action is responsive to amendment filed 03/09/07.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lui et al. (Pub. No.: US 2002/0050983) in view of Adler et al. (Patent No.: US 6,630,929).

Regarding claims 1 and 13, Lui teaches a touch panel device (fig. 18) having at least one pair of excitation section (79) for exciting surface acoustic waves by application of a burst wave and receiving section (73) for receiving surface acoustic waves, which are arranged to face each other on a substrate capable of propagating surface acoustic waves, for propagating surface acoustic waves between said excitation section and said receiving section on said substrate and detecting a position of an object in contact with said substrate, based on received results by said receiving section [0171-0173], said touch panel device comprising:

a measuring section for measuring strength of surface acoustic waves received by said receiving section [0159-0161].

Lui differs from claim 1 in that he does not specifically teach a control section for controlling the wave number of the burst wave to be applied to said excitation section, based on the strength of surface acoustic waves measured by said measuring section.

Art Unit: 2629

Adler teaches a control section (700) for controlling the wave number of the burst wave to be applied to said excitation section, based on the strength of surface acoustic waves measured by said measuring section (col. 8, lines 48-67, col. 14, lines 7-14). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the resistance value as taught by Adler in the system of Lui in order to achieve stable touch sensitivity on the touch device.

Regarding claim 2, the combination of Lui and Adler teaches said measuring section measures the strength of surface acoustic waves with the passage of time, and said control section controls the wave number of the burst wave, based on a change in strength of the surface acoustic waves with the passage of time which is measured over a predetermined period by said measuring section (col. 18, lines 6-7 of Adler).

4. Applicant's arguments with respect to claims 1, 2, and 13 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jennifer T. Nguyen whose telephone number is 571-272-7696.

The examiner can normally be reached on Mon-Fri: 9:00am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Hjerpe can be reached on 571-272-7691. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
